

A photograph of two young children playing outdoors in a grassy area. Both children are covered in mud, particularly on their faces and clothes. The child in the foreground is a girl with blonde hair, wearing a light green t-shirt, and is laughing with her mouth wide open. The child in the background is a boy with dark hair, wearing a grey tank top, also laughing. The background is a soft-focus green field.

YOU KNOW WHEN YOUR SITE'S BEEN **SOILFIXED**

The no-nonsense way to turn your
site from contaminated to all clear

soilfix
GROUND RISK SOLUTIONS

GREAT ADVICE, EXPERT PLANNING, AND A JOB WELL DONE

You can't afford to take chances with remediation work. At Soilfix we have an outstanding track record of successfully delivering projects across the UK, from identifying requirements to completion and final verification.

Whether it's soil and groundwater remediation, decommissioning, demolition or specialist enabling works, trust us to deliver on our promises. No contamination problems, no doubt, no fuss.

AWARD-WINNING REMEDIATION SOLUTIONS SINCE 2004

For over 15 years we've been providing our remediation solutions across a wide range of development sites and settings, in both the commercial and public sectors. During that time our mission has always been '**to understand and manage risk in the ground**' and we've developed an outstanding reputation for delivering technically robust and innovative remedial solutions.

We endorse a 'brownfield first' approach because it removes many barriers to construction and speeds up the development process. It also protects our precious environment that is so important to improving our mental and physical wellbeing. Among the brownfield sites we regularly unlock for development are former gasworks, chemical works, landfill sites, shipyards and fuel storage facilities.

See how we work with you, to get your site the all clear.

GROUND RISK SOLUTIONS

CLIENT COMMITMENT, LEADING INNOVATION & PROJECT CERTAINTY

We offer a comprehensive, professional service tailored to your individual needs, helping to solve the problems you have with your land.

WE PROMISE YOU:

- Confidence that the job is carried out in line with industry best practice, to regulatory standards and the site is safe to redevelop or continue operation.
- Clarity with technical information communicated concisely and in a way that's easy to act upon with truly informed, confident decisions.
- Innovation to achieve cost-effective and sustainable solutions to the multitude of challenges that brownfield sites pose.
- Support from industry-leading remediation experts when it's needed.
- Partnership via strong relationships with a main contact who has absolute focus on meeting your objectives.

A PROVEN TRACK RECORD

From our offices in Avonmouth (Bristol) and Rayleigh (Essex) and Stoke-on-Trent (N. Staffs), we're completing challenging, complex remediation projects and building long-term relationships across the UK. Delivering on time, on brief and on budget.

Acting as either Principal Contractor or Prime Sub-Contractor, we've developed partnerships with a wide range of valued clients:

St William
Designed for life

wsp GOLDER

sanofi

RAMBOLL

Vistry Group

Locat ED

“The flexibility and professionalism that Soilfix bring to each stage of a project has made them a key partner in our delivery of remediation projects in the UK.”

Project Manager, Leading UK Land & Property Company

“Soilfix make business easy – they genuinely make you believe you are their only customer.”

Technical Director, Leading UK Developer

EXPERTISE AND PROFESSIONAL SUPPORT TO **GET THE JOB DONE**

We provide a complete service for the preparation and clean-up of brownfield sites.
Our services include:

Soil & groundwater remediation

Carried out using the most practical and appropriate technique(s), only applied once we have fully understood your objectives and often following a detailed options appraisal.

Decommissioning, decontamination & demolition

Completed as an integral part of a remediation contract where programme/cost savings can be achieved through effective phasing, recycling of materials and managing pollution risks.

Site enabling works

Combined with remediation to provide a 'one-stop' package as Principal Contractor or Prime Sub-Contractor. As well as removing the barriers to redevelopment, this adds considerable value by reducing various project risks – in particular programme and commercial. Works include geotechnical improvement, development platforms, bank stabilisation, retention solutions, archaeological and ecological support.

Client support & regulatory signoff

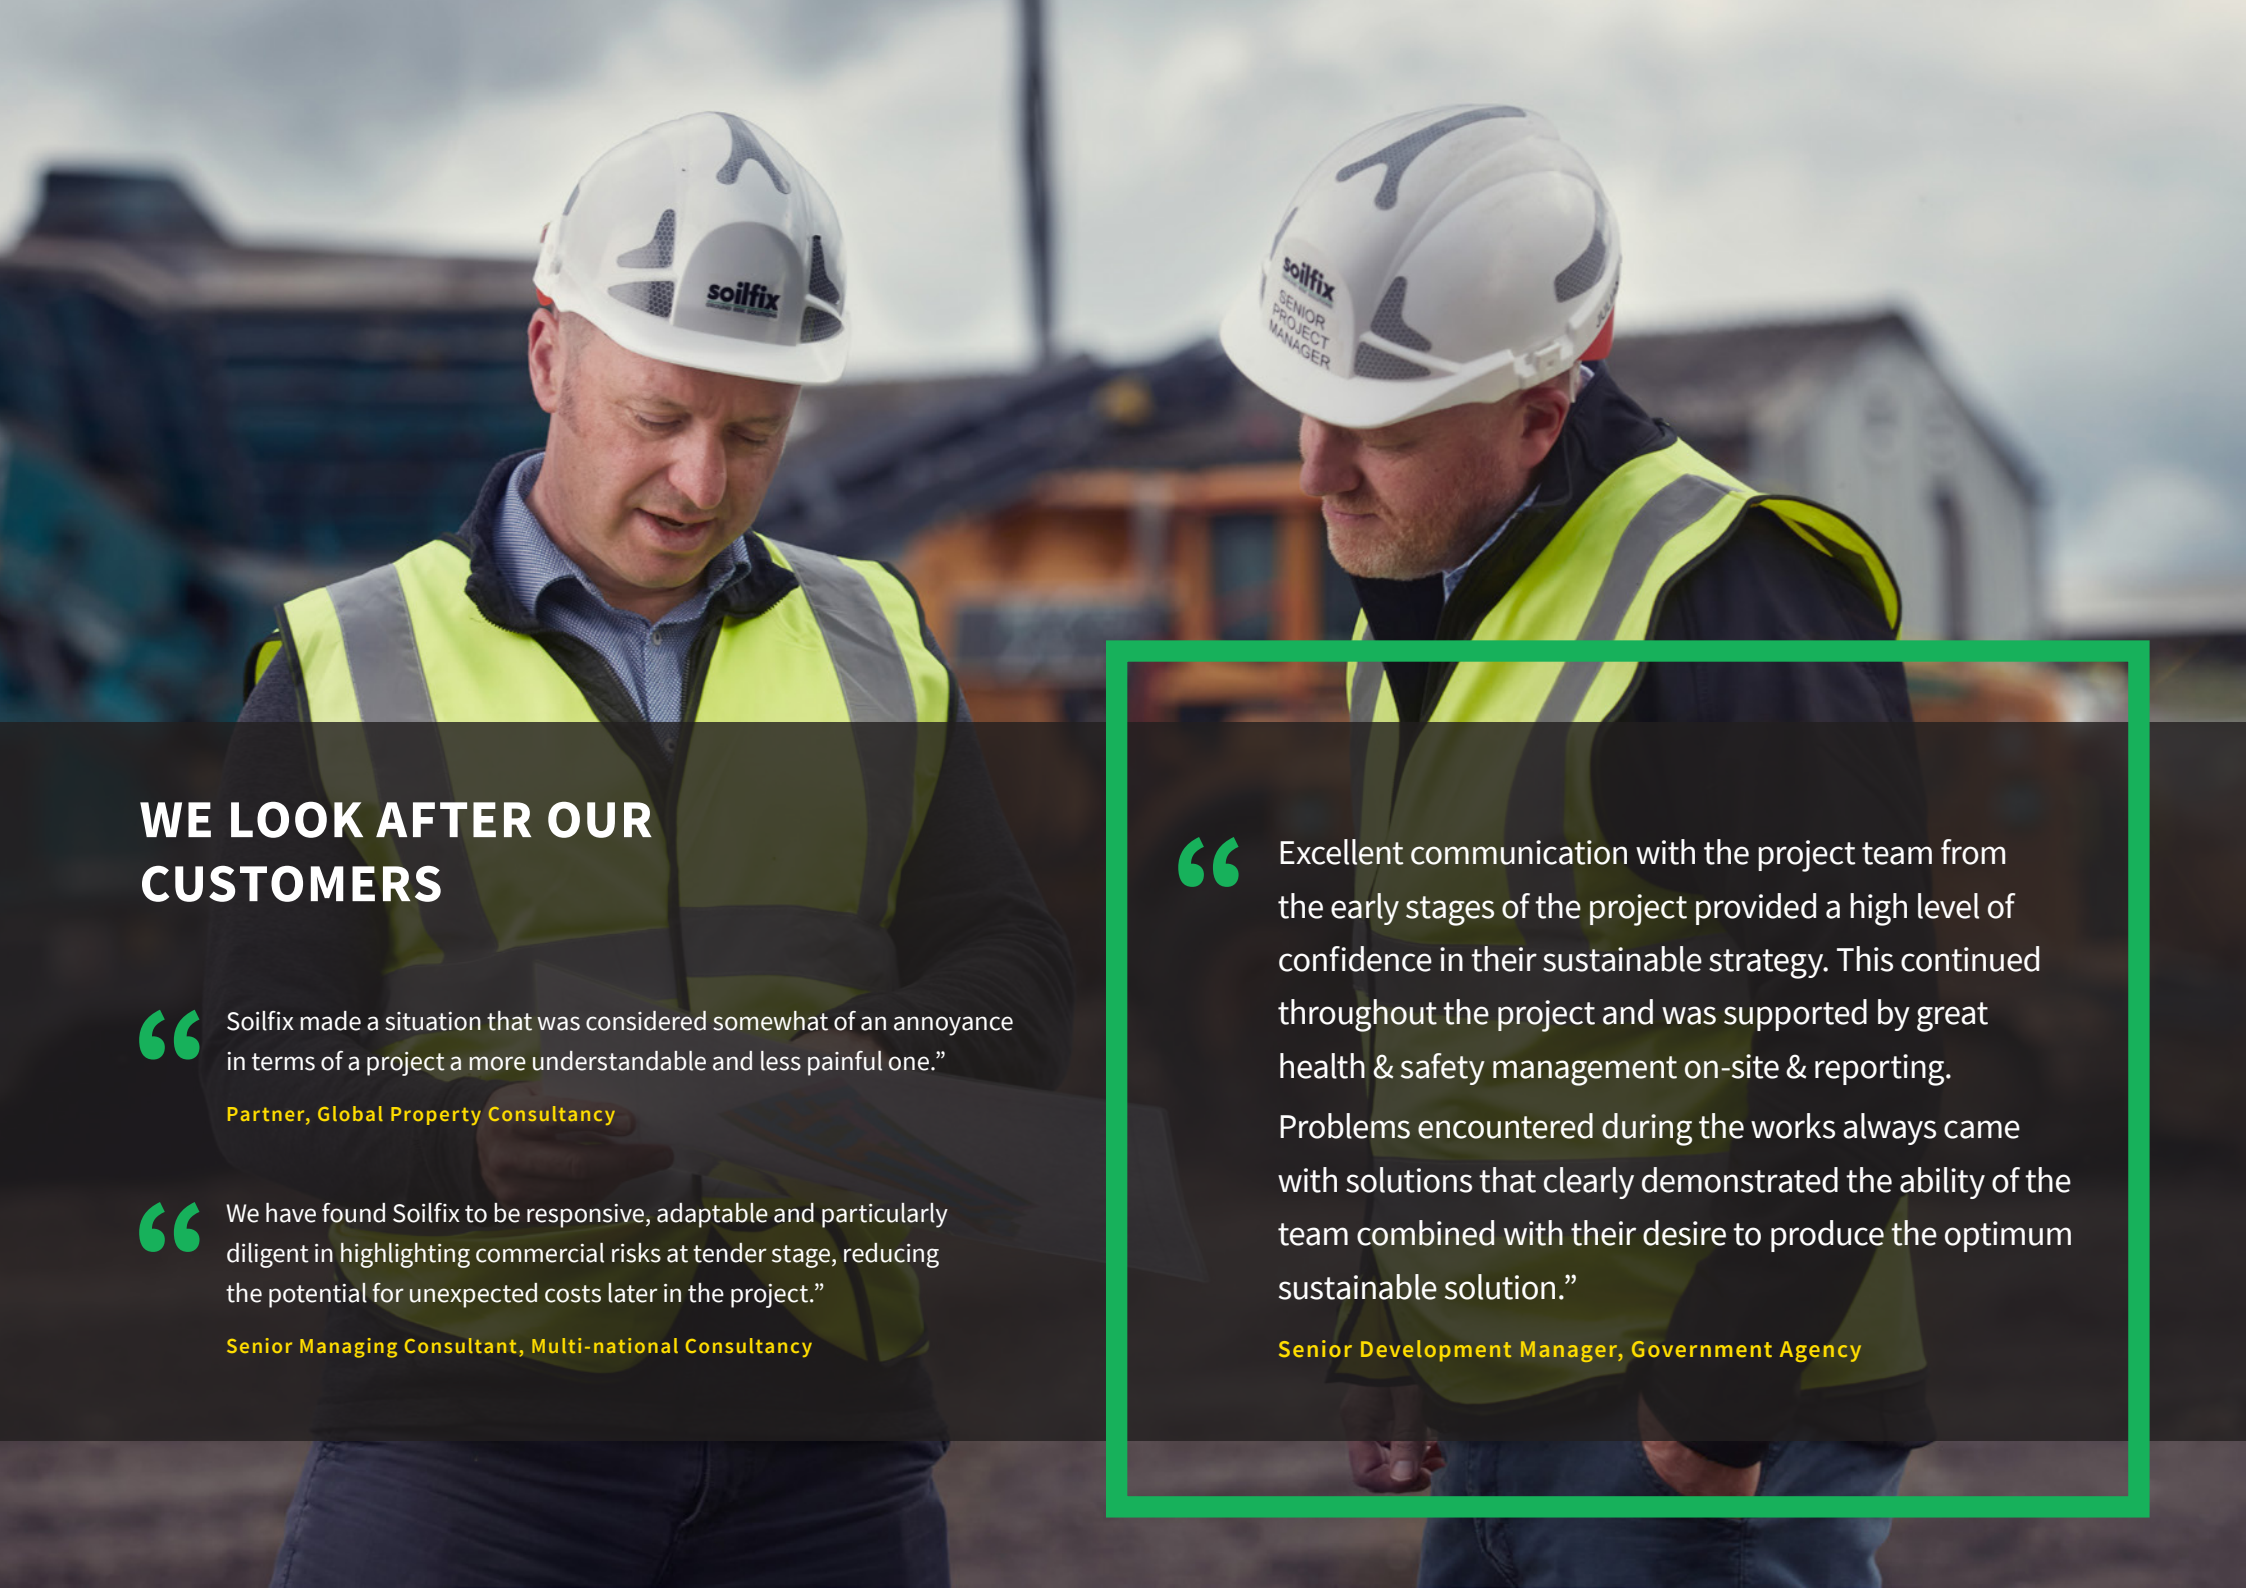

We're committed to building long-term relationships by always meeting your objectives and expectations. Regulatory signoff is achieved for D&B contracts following a transparent, robust and defensible verification process.

Specialist services

We provide a range of specialist services to clients and consultants, including costed technical appraisals, due-diligence support, waste management advice, pilot optimisation trials and remediation strategy support.

Health, safety & environmental

Our integrated management system is accredited to BS EN ISO9001, 14001 and 45001. We pride ourselves in having an exemplary Health, Safety & Environmental record with no prosecutions or enforcement actions in over 15 years.

WE LOOK AFTER OUR CUSTOMERS

“ Soilfix made a situation that was considered somewhat of an annoyance in terms of a project a more understandable and less painful one.”

Partner, Global Property Consultancy

“ We have found Soilfix to be responsive, adaptable and particularly diligent in highlighting commercial risks at tender stage, reducing the potential for unexpected costs later in the project.”

Senior Managing Consultant, Multi-national Consultancy

“ Excellent communication with the project team from the early stages of the project provided a high level of confidence in their sustainable strategy. This continued throughout the project and was supported by great health & safety management on-site & reporting. Problems encountered during the works always came with solutions that clearly demonstrated the ability of the team combined with their desire to produce the optimum sustainable solution.”

Senior Development Manager, Government Agency

WE'RE BUILDING A **BETTER** BUSINESS

At Soilfix we believe that sustainable value is found when balancing the needs of our business, our environment and our people. It's a professional and ethical approach that has led to our code of responsible business conduct:

Our environment

Environmental management and sustainability lie at the heart of what we do. We create shared value through responsible remediation and materials re-use, whilst ensuring our clients are fully compliant with current environmental legislation.

Our safety culture

Given the nature of our work and the type of machinery involved, the sites we work on can be dangerous without proper management. That's why we take site safety seriously and have even devised our own safety initiative – 'SafeGround'.

Our people

We're dedicated to providing a safe, exciting and rewarding working environment that creates high productivity, continual professional development and job satisfaction. We have an open-door policy that encourages communication and innovative solutions to challenging problems.

MEET THE SOILFIX SENIOR TEAM

Our expert, helpful team has the **skills, experience** and **‘can-do’ attitude** to deliver challenging projects on time and on budget. To ensure continuous improvement, training programmes are tailored to **our people’s individual needs and aspirations**, so you can always be certain you’re dealing with competent, professional remediation practitioners.

George Evans
Managing Director

George is a remediation expert with over 30 years’ experience in contracting, consultancy and industry. He takes overall responsibility for business management and strategy, financial control and new business development within Soilfix.

Steve Jackson
Sales & Marketing Director

Steve is a remediation expert with over 25 years’ experience in contracting, consultancy and industry. He takes lead responsibility for marketing and new business development within Soilfix as well as providing technical and commercial direction.

Richard Mabe
Operations Director

Richard has over 30 years’ experience in remediation contracting and civil engineering. He has overall responsibility for Health and Safety and operational delivery of projects, ensuring Soilfix’s high standards are continually met on programme and to budget.

Paul Hazlehurst
Technical Director

Paul has over 18 years’ experience in contaminated land investigation, assessment and remediation. He has responsibility for providing technical oversight – and support – to Soilfix operations and business development. He also supports our compliance in Quality, Health, Safety and Environmental Management.
